## Info

■ We recommend installing the bathtubs to already finished walls and flooring (already tiled or laid).

### Built-in models

**⚠ WARNING:** for built-in models, inspection panels should be installed on all sides (ref. 6).

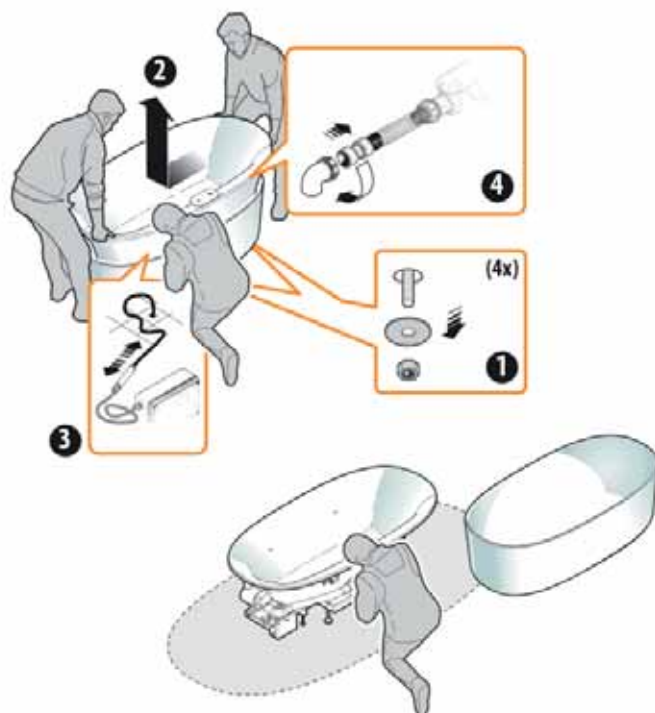

■ Access can be closed off using removable panels. The system must also be equipped with adequate ventilation, with holes between the tub coating and the removable panels, or there should be evenly spaced and fully unobstructed openings.

The panels must be securely attached and a suitable tool must be used for their relative removal.

Openings, holes and grilles used for ventilation purposes must not permit the infiltration of objects with diameter of Ø 12 mm.

### Freestanding models

**⚠ WARNING:** for freestanding models Arga®175x85, a space needs to be left free for the tub during installation and for any future maintenance or repair work.

■ Tub fixing system with brackets (S)  
(Arga®175x85 freestanding models)

These models are equipped with brackets ("S", see data sheet)

which stop the tub from moving in the event of accidental knocks or pressure.

In the event of maintenance work which requires the tub to be moved, first move the tub in one direction or the other, depending on how the brackets have been fixed. When preparing the floor drain, please bear this in mind and position the pipe in one of the two areas shown (1 or 1a).

**⚠ When fixing the brackets to the floor, make sure you do not drill through any pipes or wires.**

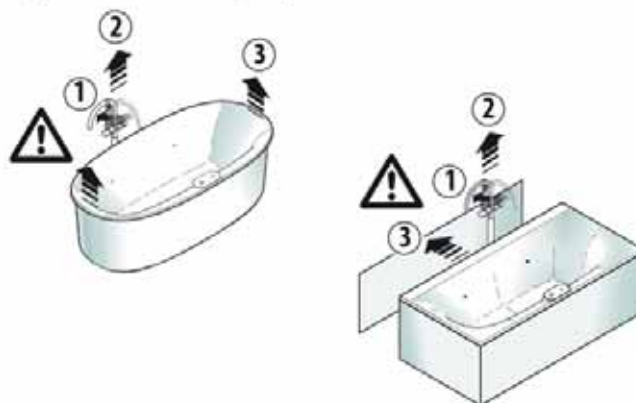

## Drain preparations and water connections

■ Please prepare the floor drain in the areas indicated (see the technical data sheet, ref. 1/1a); for Arga®175x85 freestanding models, please see the section "Tub fixing system with brackets (S)".

■ Water can be supplied via an external tap unit:

- for built-in models, position the outlet for the two pipes for hot and cold water on the floor, as shown in ref. 5.

- for freestanding installation, if you want to place a freestanding bath mixer floor mounted, during the assembly please be sure the bathtub could be easily removed (*mod. Arga® 175x85*) or at least panels could be removed (*mod. Arga® 180x90*); this precaution is important to facilitate maintenance and/or the replacement of damaged pieces.

**⚠ Where "hard" water is present, it is advisable to install a decalcifier in the water system supplying the appliance, in order to reduce and/or avoid calcareous deposits.**

**⚠ ATTENTION:** (IEC 60335-1/A2) The pressure of the water system supplying water to the appliance must not exceed 600 k Pa (6 bar).

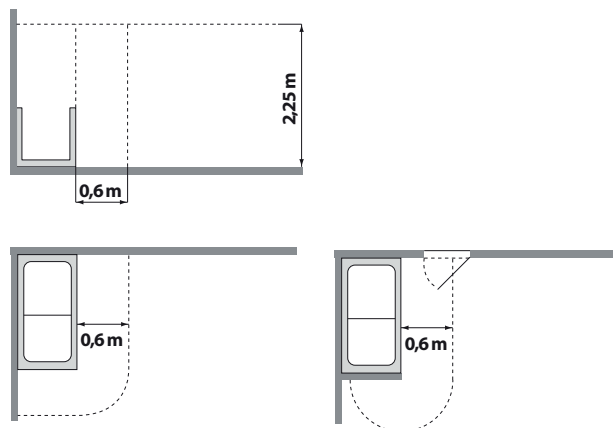

## Electrical wiring setup

■ The power supply cable must be installed near the indicated position (see technical specifications, ref. 2), leaving it long enough so it can be connected to the box (fastened to the frame). The cable can follow various paths provided that there are no loose connections; refer to the chapter on “**Electrical safety**”.

■ It is recommended to prepare the electrical power supply with one single-phase line (**voltage between phase and neutral: 220-240V**).

■ The device can be powered with a double phase line, **providing that the voltage between phases is 220-240V**.

standards and regulations in the Country where the appliance is installed; no electrical installation is to be carried out in the immediate area surrounding the appliance; a distance of at least 60 cm and a height of at least 225 cm must be respected.

## Electrical safety

Jacuzzi® hydromassage products are safe appliances, manufactured according to **EN 60335.2.60, EN 55014-1, EN 55014-2**. They are tested during manufacturing in order to guarantee user safety.

Installation must be carried out by qualified and authorized personnel, in compliance with the national provisions in force.

⚠ **it is the installer's responsibility to select the materials, to carry out the installation correctly; and to verify the condition of the network to which the appliance will be connected and its capability to ensure safety.**

The Jacuzzi® hydromassage tubs are Class "1" appliances and therefore must be secured and connected in permanent fashion, **without the presence of intermediate junctions** to the electric mains and the ground system.

⚠ **The building's electrical system and ground system must be efficient and must conform to legal regulations and specific national standards.**

⚠ **An appropriate device must be provided, which forms part of the fixed system, and installed in compliance with current legislation in force, with the purpose of disconnecting the appliance from the mains.**

For connection to the supply network, we advise installing an isolating multi-pole switch, which will ensure complete disconnection in the instance of a category III over voltage; this device must be connected to an area that complies with the safety regulations governing bathroom safety.

⚠ **Switches and electrical devices, according to regulations, must be connected to areas out of the user's reach.**

The installation of electrical devices and appliances (sockets, switches, etc.) within bathrooms must comply with legal

To connect to the building's electrical system, you must use a cable protected with a sheath with characteristics not inferior to type **H 05 VV-F 3x2.5 mm²**.

The appliance is equipped with a LED lighting system in compliance with Standard **EN 62471**.

⚠ **The appliance must be powered by means of a differential switch with operating current which does not exceed 30 mA.**

⚠ **Parts incorporating electrical components, except remote control devices, must be located or fixed so that they cannot fall into the tub. Live components and equipment must be out of reach of individuals in the tub.**

⚠ **If the building's electrical system is not able to guarantee a stable power supply, it is recommended to install a voltage stabiliser that suitably dimensioned for the required power upstream of the equipment.**

⚠ **The Jacuzzi® hydromassage tubs are equipped with a terminal, located near to the pump and identified with the symbol ⚡, to allow for equipotential connection of the surrounding metal masses, as required by standard EN 60335.2.60.**

⚠ **ATTENTION! Before carrying out any maintenance operation, disconnect the appliance from the power supply line.**
